

BTBP Skin Advisor Pro CLARITY™

The Skin Advisor Pro System is powered with BTBP's Artificial Intelligence Engine. It is capable of performing an analysis in about two minutes on skin concerns such as acne, fine lines and wrinkles, redness, roughness, visible pigmentation, sun damage and visible pores.

Fully customizable to your brand's theme, this system provides automated product recommendations suitable to the client's skin condition.

The Skin Advisor Pro System is compact and makes transportation a breeze.

Capture with White & Blue light

BTBP Clarity Skin Advisor Pro system captures digital, high resolution full face images for recognition and extraction of particular skin condition features. Images are taken in multi-spectral lighting : true white light and safe blue light capture to reveal skin conditions on and beneath the skin's surface layer. We use our patented blue light wavelength to replace the dangerous UV light in the system. The system calculates skin tone evenness measurements, UV damage and susceptibility, pore health for calculating the risk of acne, and wrinkle classification according to severity level.
